Intro

Hello!

Thank you for purchasing your Saint Doom Fuzz Pedal v2.0 from Vein-Tap.com. It's a terrifying little beast and we're sure you're going to have an awesome time experimenting with the sounds this simple beauty has to offer. On the next page is a diagram of Saint Doom: all the points are explained there.

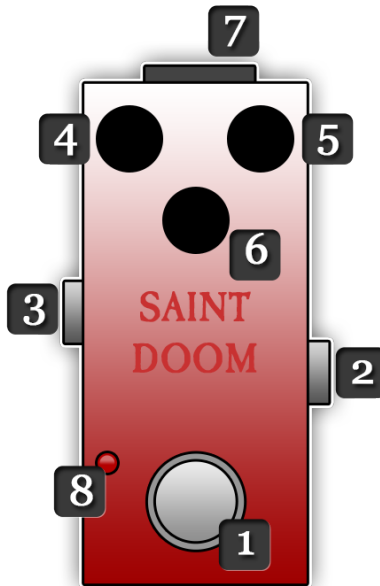

Remember this is an absolute monster, especially when used with very clean amp tones, so be sure to turn this all the way down when you first use it and slowly dial in the volume you need. We made this little fella loud. Respect him.

Thanks again, and enjoy Saint Doom!

Ben

Pedal Diagram

1. Footswitch – turn Saint Doom on and off with this stomp switch. Saint Doom is wired with true bypass, so he won't suck tone when he's not being used.
2. Input – plug your guitar, or the previous effects pedal in your chain, in here.
3. Output – plug your amp, or the next pedal in your chain, in here.

4. Doom Control – this controls the amount of fuzz which is added to your signal, from almost none (0) to far too much (11).
5. Tone Control – this controls how much high end is cut or added to your tone, going from very dark (0) to bright (11)
6. Volume Control – controls how loud Saint Doom is when engaged. Goes from silent (0) to loud (11).
7. Power Jack – plug a standard, centre negative 9v power supply here. Most standard power supplies will work here: if it'll power a Boss pedal, it'll power Saint Doom.
8. LED – this tiny LED will let you know whether Saint Doom is engaged or bypassed.

Outro

And it's as simple as that! I hope you'll love Saint Doom as much as I do, and that it soon becomes an essential part of your pedalboard. Remember that Saint Doom enjoys a lifetime guarantee, so if ever you have any problems, get in touch with me at info@vein-tap.com and I'll put any problems right or answer any questions you may have.

Enjoy your new pedal, and thanks again for choosing Vein-Tap.com!

All the best,

Ben
